Saving CO₂e by fabricating
Schüco Low Carbon aluminium

2025

SCHÜCO CARBON CONTROL

Minimising CO₂ in construction.

In **2025** our partner Façadis Gevelbouw fabricated **Schüco Low Carbon aluminium profiles*** and therefore made a major contribution towards protecting the climate.

Compared to standard Schüco aluminium profiles**, profiles made from **Schüco Low Carbon aluminium***** save around **3.27 tonnes of CO₂e per tonne** aluminium profile – which equals **46% saved CO₂e**.

The savings made as a result of the commitment of Façadis Gevelbouw amounts to **379 tonnes of CO₂e**. We would like to congratulate Façadis Gevelbouw on their active commitment and are delighted to be able to support them in their ongoing transformation process towards becoming a decarbonised building supplier.

* Schüco Low Carbon aluminium is supplied in accordance with the allotment process. This means that no differentiation is made between the different material grades for delivery. The profiles supplied may therefore consist of standard, LC, ULC or ULC+ aluminium, irrespective of what has been ordered. To find out more, visit: www.schueco.de/allotment-process.

** Reference value for standard Schüco aluminium profiles in accordance with Environmental Product Declaration (EPD), October 2023.

*** Values for Schüco Low Carbon aluminium profiles in accordance with Environmental Product Declaration (EPD), January 2025.
